

Project Executable Files

Date	1 July 2026
Team ID	SWITD-2026-9706
Project Name	Voice Based Concept Understanding Analyser
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	No
5	Environment configuration file (.env.example)	No
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable for mobile/desktop apps)	No
8	Dockerfile / Containerization config (if applicable)	No
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

An overview of your project's file and folder structure below:

```
Source_Code/
├── app.py
├── speech_to_text.py
├── audio_utils.py
├── semantic_eval.py
├── scoring_engine.py
├── report_generator.py
└── requirements.txt
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	NA — runs locally via streamlit run app.py, not cloud-hosted
Login Credentials (Demo)	Not applicable — no login required
Platform / Hosting Provider	Local machine (Windows), via Streamlit
Repository Link	https://github.com/Palak-web021/VBCUA
Demo Video Link	https://drive.google.com/file/d/11JqN0BQf5R0UjD1v8_fPccHPhP9HivKN/view?usp=sharing

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites: Python 3.10+, ffmpeg installed, ~10GB free disk space, internet connection (for first-time model download only)

Step 1: Clone the repository: `git clone <your-repo-url>`

Step 2: Create virtual environment: `python -m venv vbcu_env`

Step 3: Activate it: `vbcu_env\Scripts\activate`

Step 4: Install dependencies: `pip install -r requirements.txt`

Step 5: Run the application: `streamlit run app.py`

Step 6: Opens automatically at `http://localhost:8501`

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	First-time run is slow (models downloaded from internet)	Expected one-time cost; subsequent runs are fast
2	torchvision import error on some setups	Now included directly in requirements.txt — resolved
3	No persistent history across sessions	By design — session state only, no database
